

Minimum feed-in tariff 2023-24

Submission received through Engage Victoria

Date submitted: 6/1/2023

Submission written by: Andrew Martin

From December 2022, we began accepting submissions on our Minimum feed-in tariff review 2023-24 via Engage Victoria (www.engage.vic.gov.au). On this website, people were given the opportunity to send us a response to a set of questions we provided.

What parts of our proposed methodology for setting the minimum single and time-varying feed-in tariff rates do you consider are appropriate?

In my opinion, I do not agree with how power companies have been able to absolutely rape Australians with power bills.

the feed-in tariff is absolutely disgraceful and then we are paying a premium at peak time.

What parts of our proposed methodology should we change?

I would recommend the feed-in tariff is set at 33 cents per kilowatt hour to compensate consumers and the power companies' charges are set for the next five years.

For our overall methodology, or parts of it, what alternative methodologies should we consider?

You need to consider how Australians who invested many thousands of dollars into Solar to both help themselves and the Planet are not disadvantaged by doing so.

In the past few years, you have enabled these companies to profit from our investment and to be honest i am not impressed with your recent decisions.
