

Minimum feed-in tariff 2023-24

Submission received through Engage Victoria

Date submitted: 20/12/2022

Submission written by: Dan Adams

From December 2022, we began accepting submissions on our Minimum feed-in tariff review 2023-24 via Engage Victoria (www.engage.vic.gov.au). On this website, people were given the opportunity to send us a response to a set of questions we provided.

What parts of our proposed methodology for setting the minimum single and time-varying feed-in tariff rates do you consider are appropriate?

Your proposed methodology does not matter

The F.I.T. was 12 when I bought my solar system. I was happy with the savings then.

I added a battery to my system and things were pretty good. Then it dropped to 8, then to 5.2. Now you want to drop it to 4.8. It's just not worth the investment any more. The only one benefiting from it is the utility company. I produce 6x the power I use and still get a bill.

What parts of our proposed methodology should we change?

For our overall methodology, or parts of it, what alternative methodologies should we consider?
