

Minimum feed-in tariff 2023-24

Submission received through Engage Victoria

Date submitted: 20/12/2022

Submission written by: Theo Sougleris

From December 2022, we began accepting submissions on our Minimum feed-in tariff review 2023-24 via Engage Victoria (www.engage.vic.gov.au). On this website, people were given the opportunity to send us a response to a set of questions we provided.

What parts of our proposed methodology for setting the minimum single and time-varying feed-in tariff rates do you consider are appropriate?

Having feed-in rates after 10pm makes no sense at all as there is no solar at this time and I don't believe any power storage is configured for feed-in

What parts of our proposed methodology should we change?

The costs associated with running a business, transporting power are all overhead costs and do not change based on how much power is being fed-in - as such the feed-in should be around 40-50% of the retail charge for that KWH of power

For our overall methodology, or parts of it, what alternative methodologies should we consider?

Should look at feed-in tariffs as a % of doing business, that way gross profits aren't made while providing little or no benefit to houses feeding-in power

it also caters for when power supply is low and if it costs more to buy it, then solar homes should also be able to get more for their power
