

Minimum feed-in tariff 2023-24

Submission received through Engage Victoria

Date submitted: 20/12/2022

Submission written by: UMA KESHARI

From December 2022, we began accepting submissions on our Minimum feed-in tariff review 2023-24 via Engage Victoria (www.engage.vic.gov.au). On this website, people were given the opportunity to send us a response to a set of questions we provided.

What parts of our proposed methodology for setting the minimum single and time-varying feed-in tariff rates do you consider are appropriate?

4.8 cents per kWh, you guys are joking. It seems you are trying discourage public from going solar. We are paying 32 cents per kWh to retailers and this is expected to go up by at least 50% by 2023 end.

What parts of our proposed methodology should we change?

You should have a policy which encourages public to go solar and use energy storage equipment for night use. A minimum of 20 cents feed in tariff should be considered.

For our overall methodology, or parts of it, what alternative methodologies should we consider?

You should have a policy which encourages public to go solar and use energy storage equipment for night use. A minimum of 20 cents feed in tariff should be considered. Provide significant rebate to public to buy solar panels and energy storage equipment.
